

Ukraine towards Carbon Neutrality

**WP4: Pilot Implementation in Ukraine, supported
by European front-runners**

1st U_CAN Review Meeting / M1-M18

19.01.2026, online

Yurii Polianskyi (Municipal institution City Institute)

Funded by
the European Union

WP4 Objectives

The aim of WP4 is to implement short to medium-term climate mitigation strategies in 6 pilot cities in Ukraine (Lviv, Kyiv, Zhytomyr, Khmelnytskyi, Ivano Frankivsk and Vinnytsia). The specific objectives are:

- Support implementation of pilot activities in six cities to demonstrate climate-neutral city solutions; and
- Integrate learnings from project and contemporary practices in short and medium-term strategies of local governing bodies in Ukraine.

WP4 Tasks and Timeline

	Task description	Lead	Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8
WP4	T4.1 Assessment of climate indicators in pilot cities	OMB						M05	D4.1	
	T4.2 Climate-neutral pilot activities in Lviv	CIL								
	T4.3 Climate-neutral pilot activities in Kyiv	ISKPI								
	T4.4 Climate-neutral pilot activities in Zhytomyr	ZCC								
	T4.5 Climate-neutral pilot activities in Khmelnytskyi	KhNU								M06
	T4.6 Climate-neutral pilot activities in Ivano Frankivsk	BRIT								
	T4.7 Climate-neutral pilot activities in Vinnytsia	ME IUD								
	T4.8 Performance assessment of initiatives in six pilot cities	ENV								

1st Review

WP4 Progress and Achievements

Task 4.5: Climate-neutral pilot activities in Khmelnytskyi (KhNU)

Ukraine towards Carbon Neutrality (U_CAN)

WP4 / Task 4.5 – Khmelnytskyi

1st U_CAN Review Meeting / M1-M18

Presenter: Khmelnytskyi National University (KhNU)

Pilot focus in WP4:

- Adaptive traffic management with a focus on urban emissions reduction ([KhNU](#))
- Knowledge dissemination via conference ([MS6](#))
- Centre supporting local policies on climate-neutral construction and energy (LYKUML)

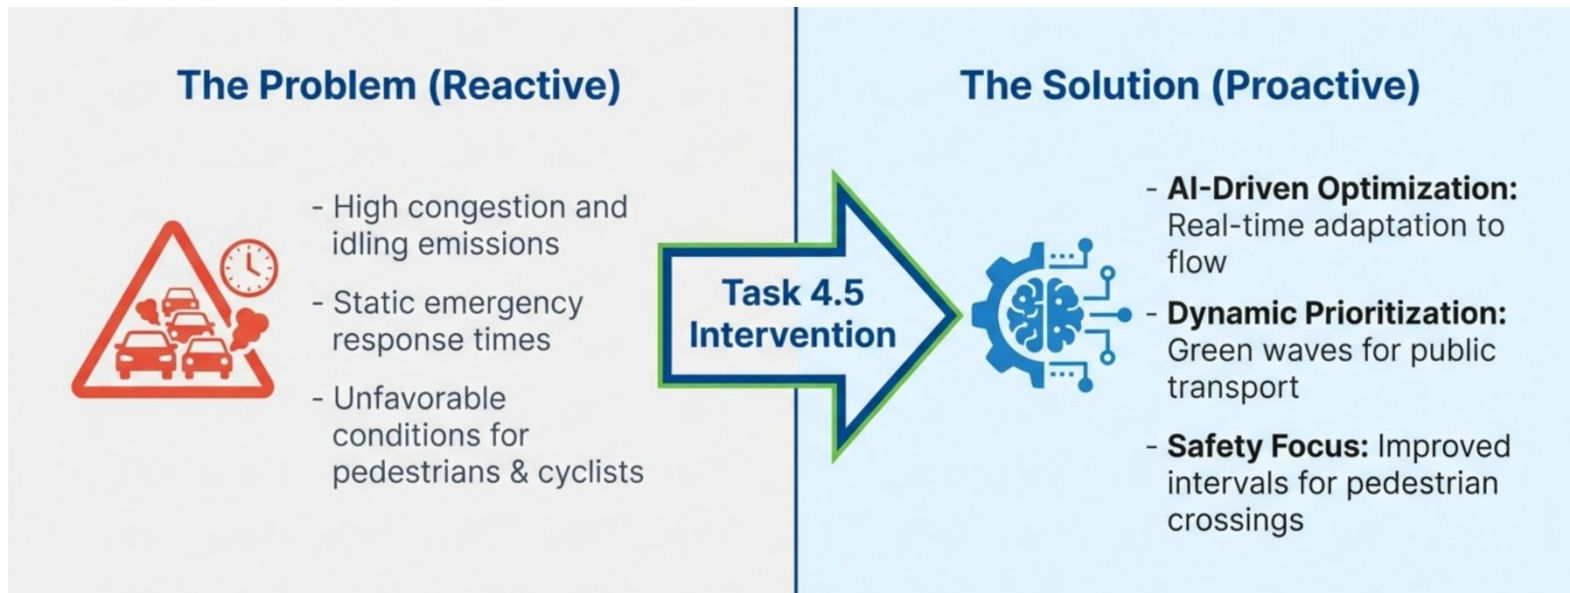

WP4 Progress and Achievements

Task 4.5: Progress Timeline (Q1–Q6) – KhNU Achievements

WP4 Progress and Achievements

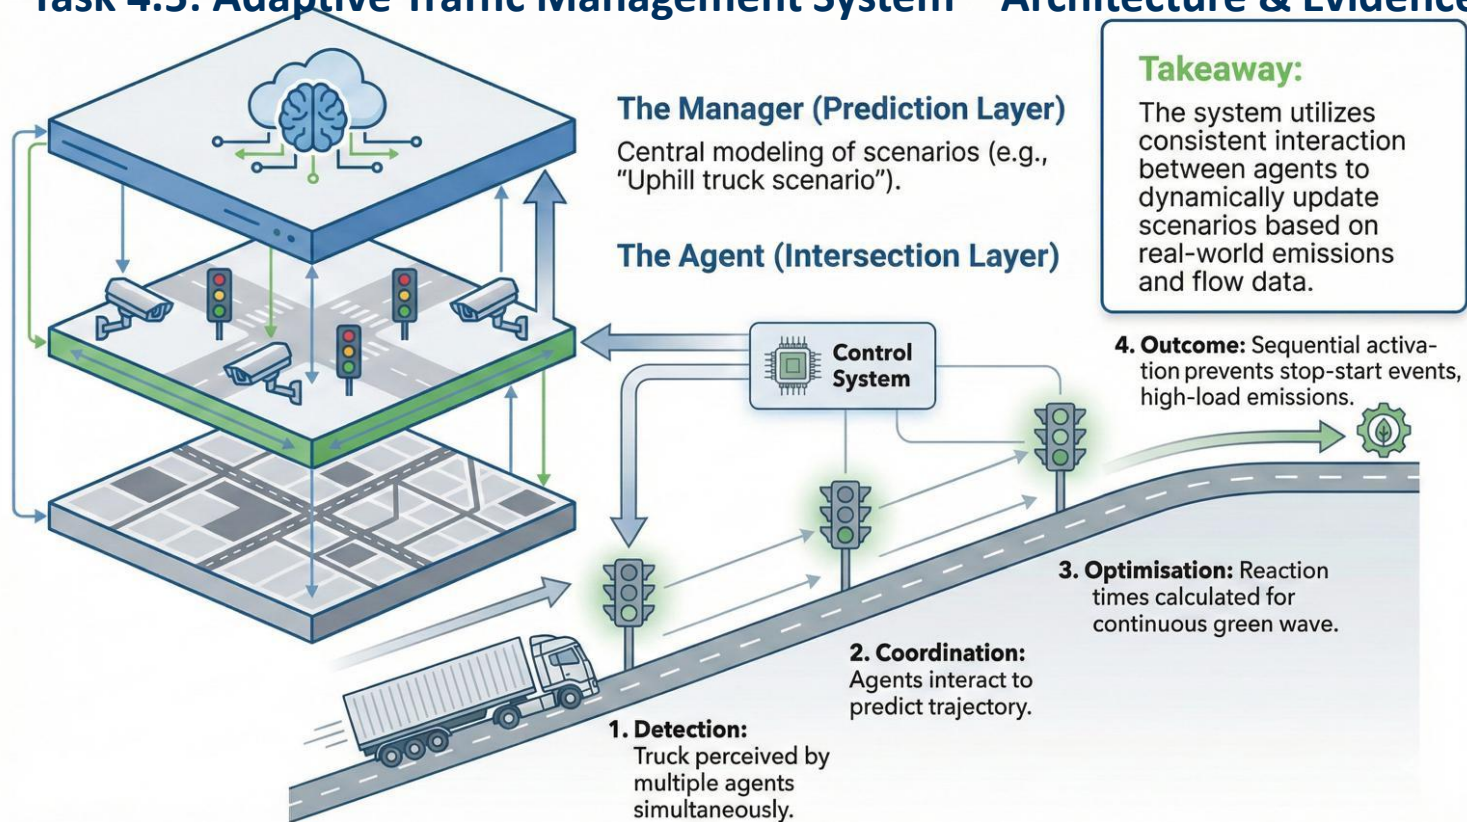

Task 4.5: Objectives, Needs & Opportunities

Primary Goal: To improve urban mobility efficiency and significantly reduce CO₂ emissions.

WP4 Progress and Achievements

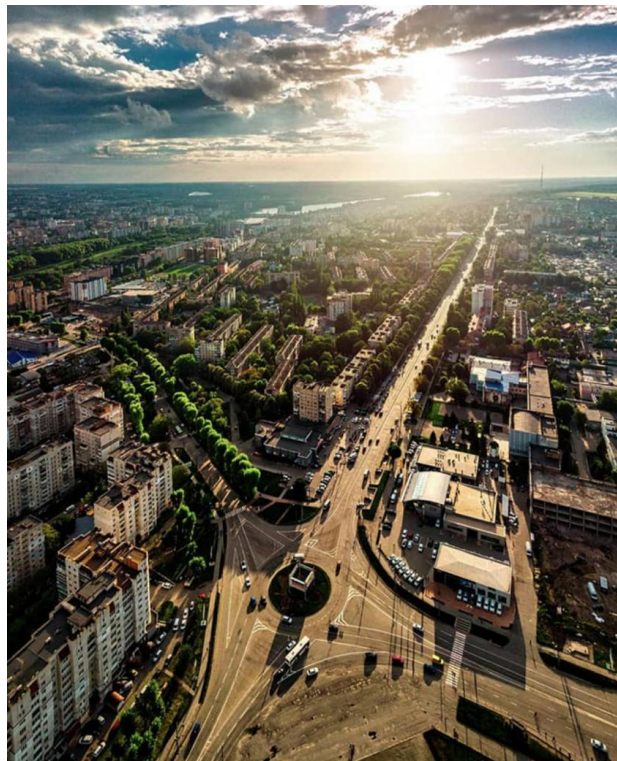

Task 4.5: Adaptive Traffic Management System – Architecture & Evidence

WP4 Progress and Achievements

Task 4.5: Conclusions, Outlook & Deliverable 4.5

- Validated a novel adaptive machine learning architecture for traffic pattern recognition, confirming its efficacy for sustainable urban planning through high-fidelity simulation.
- Achieved rigorous scientific dissemination by publishing core research findings in *Future Transportation* (Q2).
- Prioritising preparations for the KhNU Conference (**MS6**) on CO₂ Emissions Reduction (**April 2026**) to scale pilot learnings across Ukrainian municipalities.
